MILLERIGHE

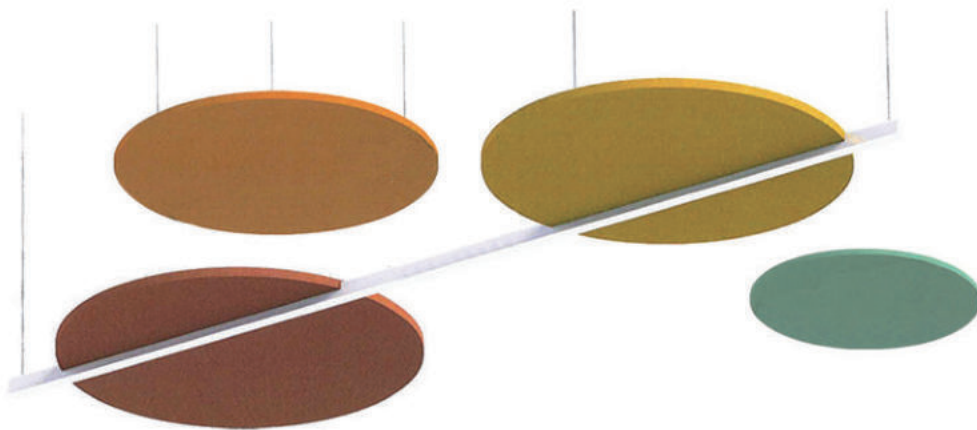

design by OnsiteStudio

Millerighe is inspired by the sophisticated interior claddings wrapping the milanese residential entryways in the fifties, standing out for its abstract and modern elegance. The density and vibration of the vertical lines provides not only acoustic confort, but especially a timeless and calm background for all activities. Design by OnsiteStudio, is the new member of ECOrange family.

ECOBOOTH WALL

ECObooth evolves from the desk integrating into the space to define real areas of privacy, thanks to combined wall solutions, making it an accessory for all offices but also for all those places where a quiet climate is required, such as libraries public. This cabin can be used both open and closed, simply by sliding the cover panel to select the desired opening. Available in plenty of finishes, also double face.

ANDAMANE

LAMP

design by Claudio
Larcher & Luca Toscano

Here's how to develop two themes with a single project: with ANDAMANE LAMP, the designers Claudio Larcher and Luca Toscano question themselves on the theme of integrated systems dedicated to the office by creating an object intended both for lighting and soundproofing. The result is a modular lamp made up of panels with a high soundproofing power and a luminous body that allows both the single installation and that of several appliances combined, creating long continuous lines of light.

MESH

A wave to be mounted and suspended from the ceiling, the ideal solution to give color and acoustic performance to any space through a young and creative language. MESH is an acoustic grid whose single elements, arranged at a fixed distance and mounted by interlocking, enable the integration of lighting and mechanical systems.

MONSTERA BAFFLE

MONSTERA is born as an ideal product to divide the spaces and at the same time, offer an excellent acoustic correction with a polite and modern design. These large suspended baffles, born from ECOrange technology, offer endless possibilities for customization both in size and choice of pattern and colors. We present it with a botanical design, the leitmotiv of Slalom 2019 collection.

. DOTS

Wool felt as well as having sound-absorbing and isolating properties, is also delightful to the touch, dirt-proof and a perfect natural filter. .DOTS starts from those assumptions to evolve into a multi-purpose tool, from curtains, to walls, to partition between two spaces, always maintaining lightness and transparency thanks to its particular perforated pattern.

ECODROP LAMP

Chandeliers help to create lights in any environment we are, from the office to the home, on a desk or up to the bedroom. For this reason ECODrop has evolved, becoming a lamp. Available in more than 100 colors, find your favorite combination!

DAPHNE

design by
Studio Algoritmo

DAPHNE sound-absorbing partitions and panels line is designed for the office and home by Studio Algoritmo for Slalom acoustic & partition system. The product, whose name is inspired by the story of the Greek myth that consecrates the organic form, arises from the observation of the game of a child in a park, intent on piercing some fallen leaves with some branches. A genuine and simple gesture, probably made by every child and therefore belong to the collective imagination. The same spontaneity is intrinsic in the object itself: thin supports hold felt sheets that recall the profile of the laurel, oak, olive and ash trees.

ECOARCH LUCE

ECOarch, a classic of Slalom production, is transformed to accommodate a light source inside, to be distributed in a punctual manner or to be placed to form a continuous surface.

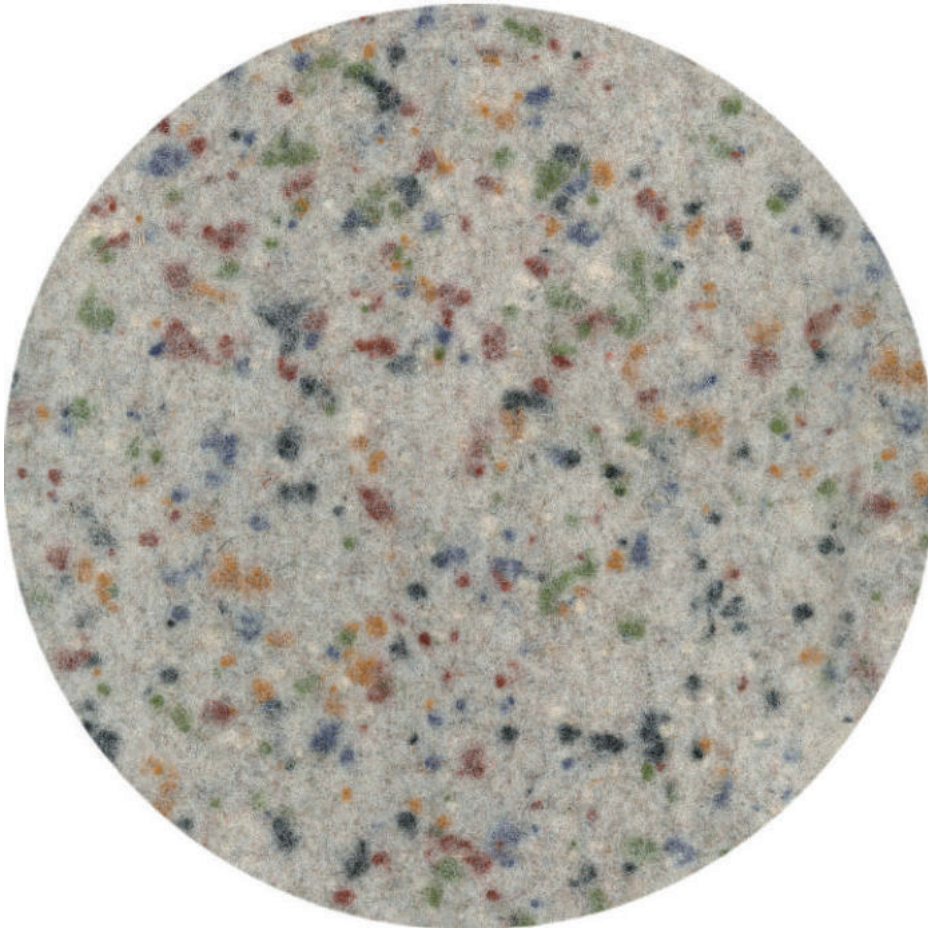

SLALOM PILLOW

ECOfelt, PETfelt, TREVI-
RA, TWEED, VELVET,
RAW. Choose the finish
you prefer to custom-
ize your spaces and your
seats with Slalom pillows.

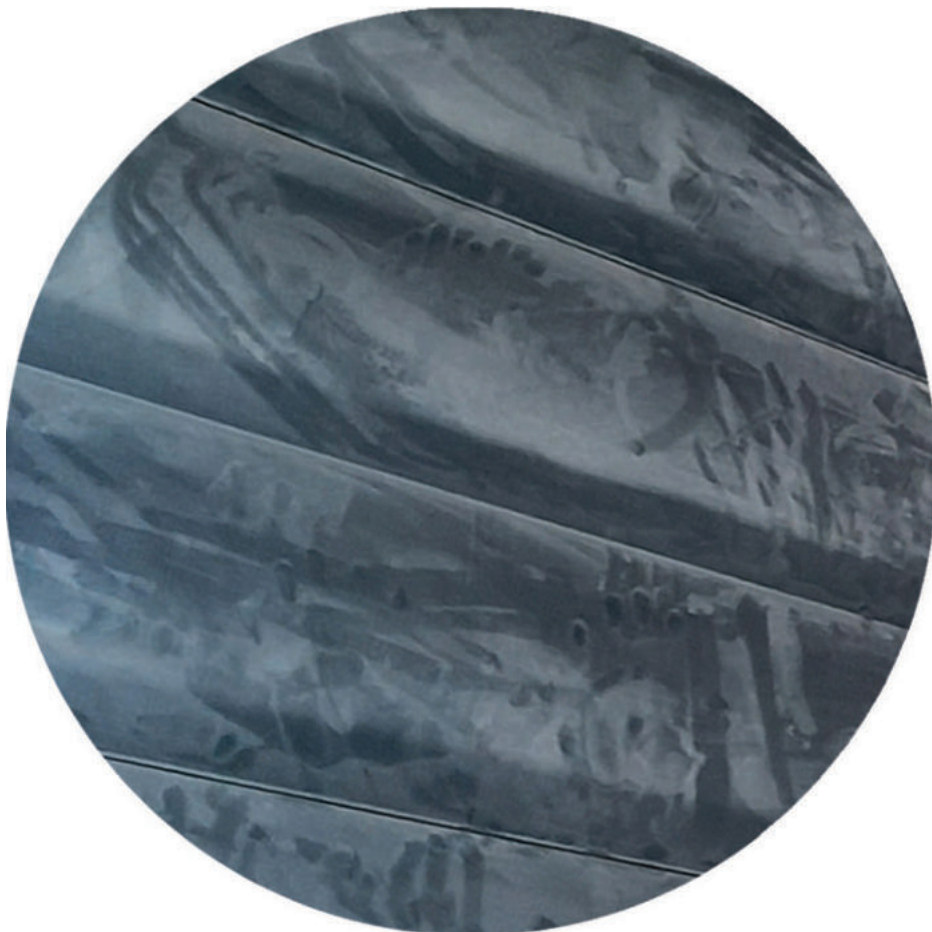

POIS FELT

Decorate your wall with a new felt finish: polka dots! Two layers coupled to choose between ECOfelt and PETfelt to acoustically correct any space but with style. Like the other Slalom's lines is available in rolls, to cover the walls with a line and ensure the design unit, or it can be cut on the pantograph in different shapes and sizes, to become a decoration.

RAW FELT

From ECOfelt rises a brand new felt: RAW FELT, a timeless, elegant and bold version. RAW FELT is available in rolls, to cover the walls with a line and ensure the design unit, or it can be cut on the pantograph in different shapes and sizes, to become a decoration.

NEW FINISH: VELVET

Velvet returns! Transparent to sound, it's particularly suitable for its wedding with sound-absorbing panels. It reappears, traditional in look, at the forefront for performance: the Slalom collection is anti drop and anti stain.

TECHNOLOGY: PRINT YOUR PANEL

Starts now for all our panels and felts a new possibility of being printed in any color. The special print enters the fibers and the fabric maintains its transparency to the sound. A more special panel, a same excellent acoustic performance.
